Enter the Service PIN Code:1986 to enter the Service Panel.

Consumables will be indicated in Red (currently out) or Yellow (less than 20%).

For example, the flavor in slot 5 is OUT and needs to be replaced, image below.

3. Select "Flavors and Enhancements'' to start the swap wizard, which will direct you through the process.

What are you swapping today?

Follow the directions on the wizard and locate the flavor box shown in **RED** which needs to be swapped, see image below.

4. Disconnect the BIB connector by unscrewing counter clockwise and scan the RFID tag on the door board, see image below.

5.Grab your new flavor box and tear away the perforation to expose the BIB connector and remove the flavor cap.

6. The wizard instructions will update to scan in the new BIB, and place it in the empty slot. You will reconnect the BIB to the flavor line, turning clockwise until it's fully seated.

Select 'Save' (or 'Continue Swapping' to add more flavors).

Finally, Prime the flavor lines. Place a bucket under the nozzle and click play. This takes about 10-15 seconds.

Click "Finish Swap" to return to the service panel.

When the Bevi is in need of a Filter Replacement the Service panel will indicate a RED filter.

It is recommended to use 3M Filter HF20

To get started select the <u>Filter</u>, under What are you swapping today?

What are you swapping today?

Follow the Filter Wizard Steps: 1.Close the buffer tank by reaching through the slot above the filter and turning the blue valve handle clockwise, a quarter turn.

Click 'Continue'

2.Remove the existing filter by unscrewing it clockwise and disposing of the old filter.

Remove the filter Solvy uncere the filter declarity Bernor the filter Australiance of wave regreates for the baseling totalet
CONTINUE

Click 'Continue'.

Locate your new 3M filter and remove the red cap. 3.Add the new filter by inserting into the filter housing. Rotate counter clockwise until it locks into place.

OPTIONAL: Edit the filter lifetime based on local water quality, between 400-10,000 gallons.

Filter lifetime	
The current filter lifetime is 6,000 gallons.	
The last filter was removed after filtering 4,739 gallons of water. Update based on tap water quality (optional).

5.Place a bucket under the nozzle and press the play button to flush for 60 seconds. Click "Continue".

6.Open the buffer tank by reaching through the slot above the filter and turning the blue valve handle counterclockwise. Click "Finish Swap".

Select "Finish Service" in the service panel to return the machine back to the dispense screen.

NOTE: Filters are NOT included in the initial install package. You can order filters at <u>orders.bevi.co</u> SKU: 901-0002

In many cases the Button will be grayed out until the action is performed. Once completed the wizard will update to allow you to click continue.

Always inspect the water to make sure there is no sediment or cloudiness from the new filter.
