

Touchless dispensing for Bevi machines

Go Touchless!

With touchless dispensing, you can now dispense your favorite Bevi flavors directly from your phone! Now available on all new and existing machines.

Here's how it works:

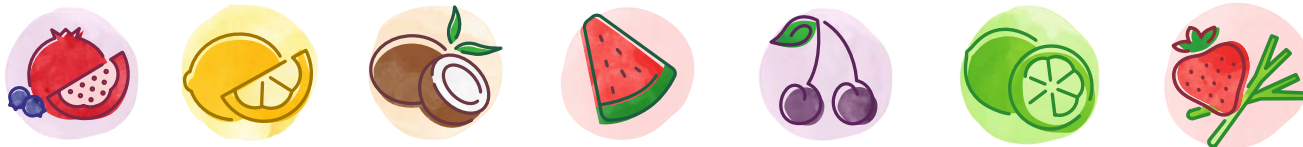

- Scan QR code on the Bevi touchscreen with your phone's camera or QR reader app
- Open link that appears on your phone's screen
- Dispense your drink as you would using the Bevi touchscreen
- Disconnect from website and enjoy

Here's how to get it:

An animation will appear on all Bevi machines with an internet connection that will explain how to enable the touchless feature on the Ingredients page. If your Bevi machine does not have an internet connection, contact your Bevi provider who can set up a connection for you.

Some other cool features:

Along with touchless dispensing, the website features flavor icons with a new look. Also, the touchless website lets you get ingredient information and monitor your bottle counter to see how many bottles you're saving.

Stay Safe and Stay Hydrated!
