

Bevi Filtration System

Bevi machines feature advanced water filtration systems designed to deliver pure, safe drinking water from your tap. With an ultra-fine membrane capable of capturing particles down to 0.2 microns, this carbon filter removes what bottled water brands and municipal tap water systems leave behind.

Great Taste

Bevi's filtration removes contaminants but retains essential minerals, ensuring water keeps its health benefits and tastes delicious at the same time.

Premium Filtration

When used with Bevi's recommended 3M HF20-i carbon filter, our machine can remove 99.9% of microplastics and other contaminants, including cysts, chlorine taste and odor, and other particulates that shouldn't be in your drinking water.

Performance you can trust

- Filtration certified to NSF/ANSI Standard 42, 53, and CSA B483.1
- High-throughput commercial-grade filter for fast dispenses
- Monitored remotely by your Bevi service provider for timely filter replacements
