

Bevi 1-Pager: Accessing the Service Panel

When servicing items inside Bevi units, changes must be logged in the Service Panel on the machine touchscreen to ensure proper remote tracking.

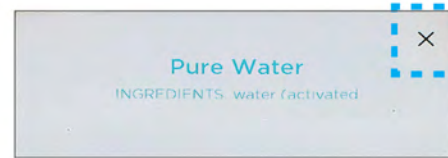

1. Select the **Ingredients** button at the bottom of the touchscreen.

2. Select **Pure Water**, in the center.

3. Select & hold **X**, until you see **Service Panel Loading** appear.

4. Select the **Start Service** button at the upper right hand corner.

5. Consumables that need to be **Restocked** are highlighted in red.

If item does not require an update, select "No Action"

6. For Standup units, open the machine door with provided key. For Countertop units, open the cabinet doors below.

7. Locate **CO₂** or **Flavors** to be replaced, as indicated in Service Panel. Proceed to replace the items.
