bevi

Replacing the CO_2 Tank in a Countertop Bevi

CO_2 tank changes must be logged in the Service Panel on the Bevi touchscreen to ensure proper inventory tracking.

1. Access the Service Panel

Select **Ingredients** at the bottom of the touchscreen.

INGREDIENTS >

Select **any flavor** or **Pure Water.**

Pure Water
INGREDIENTS
water (activated carbon filtration)
More...

Select & hold upper right **X**, until you see **Service Panel Loading**

2. Start Service

Select the **Start Service** button at the upper right-hand corner.

Start Service

If CO_2 needs to be restocked, it will be **highlighted in red**.

Restock

If the flavor does not require an update, select **No Action**.

3. Open the bottom cabinet doors

Locate old CO_2 Tank to be replace

4. Detach and shut off the tank

Detach the nylon strap holding the tank in place.

Shut off the tank by turning the tank knob **clockwise** until it stops turning.

5. Disconnect the hose and remove the tank

Using an adjustable wrench, **disconnect the hose connector** by turning the nut **counterclockwise**.

Remove the old CO2 tank from the Bevi unit.

6. Connect the new tank

With the **nylon washer** between the hose and the new tank, hand tight hose connector onto the tank.

Nylon Washer

Then, **tighten the hose connector** with an adjustable wrench in a clockwise fashion, following Step 5 but in reverse.

7. Reopen the tank and reattach the nylon strap

by following Step 4 but in reverse.

For v1.5 Standup units, the pressure setting is preset, so no further pressure regulator adjustment is needed.

**For other units**, ensure the pressure on the top gauge reads about 87 psi / 6 bar.

8. Update Service Panel and End Service

Select the **Restock** button for new CO_2.

RESTOCK

Select the **size** of the new CO_2 tank that was installed.

10lb
5lb

Select **End Service**. Close and lock the unit with the key provided.

End Service
