

# Out Message on UI Dispense Screen

**NEW 'Out' Message feature: To provide the best experience for our customers, the bevi machine will now show an 'Out' message if the flavor has expired or run out.**

To clear this 'Out' message, the flavor needs to be replaced & swap logged in the Service Panel as shown below. The new expiration feature will require entering expiration date during flavor replacement, also shown below.

## 1. Access the Service Panel

Select Ingredients at the bottom of the touchscreen.

Select any flavor or Pure Water.

Select & hold upper right X, until you see Service Panel Loading

## 2. Start Service

Select the Start Service button at the upper right-hand corner.

Flavors that need to be Restocked are highlighted in red (due to run out or expiration).

If a flavor does not require an update, select No Action.

## 3. Open the bottom cabinet doors

Locate Flavors to be replaced, as indicated in the Service Panel.

## 4. Disconnect the Flavor Connector and discard old boxes

For green Encore connectors, rotate counter-clockwise, until disengaged. Slide off the connector.

For gray QCD connectors, push on tabs and pull until the connector fully disengages.
