

Cleaning your Bevi[®] touch screen

Important: Do not spray isopropyl alcohol directly on the screen. Never use window cleaners, household cleaners, compressed air, aerosol sprays, solvents, ammonia, abrasives, or cleaners containing hydrogen peroxide to clean the touch screen.

1) The recommended way to disinfect the touch screen is to lightly spray 70% isopropyl alcohol onto a microfiber cloth.

2) Lightly wipe the touch screen*

*This is not intended for long term maintenance and over time may permanently damage the touch screen. For long term maintenance and periodic cleaning use specially formulated electronics, or disinfecting wipes.
