

The wait is over. Your Bevi machine now provides touchless dispensing with a smartphone.

This feature is a FREE upgrade that has automatically been sent to all Bevi machines with internet connections. You should see an animation on the touchscreen with instructions for activating touchless dispensing. Here's all you need to do:

Activating Touchless Dispensing

1. Go to the Ingredients page using the Bevi Touchscreen.
2. Slide the Touchless toggle switch to the right.
3. Touchless dispensing is now enabled

Using Touchless Dispensing

1. Scan QR code on the Bevi touchscreen with your phone's camera or QR reader app
2. Open link that appears on your phone's screen
3. Dispense your drink as you would using the Bevi touchscreen

With touchless dispensing enabled, you get all the functionality of your Bevi dispenser right from your smartphone. You can also continue to use the touchscreen as normal, even with the touchless feature activated.
