

Signature Standup Carbonation Plus Nozzle One-Pager

NAMING

Signature Standup 2.0 Carbonation Plus Nozzle

The name was considered for all drinkers, partners, and clients so it should be consistent across all the different messaging channels.

PRODUCT DESCRIPTION

The Signature Standup 2.0 Carbonation Plus Nozzle is designed to improve carbonation performance and reduce foaming, resulting in more consistent pours. It also ensures compatibility with BeviPop™ and future beverage offerings, keeping the Bevi system performing at its best.

GENERAL INFORMATION

1. The Signature Standup 2.0 Carbonation Plus Nozzle is required for BeviPop installation. If a machine does not have the upgraded nozzle, it will not be able to scan in BeviPop flavors. It can be ordered and installed independently of BeviPop, allowing upgrades to the machines ahead of new beverage deployments.

Upgrade status can be verified in The Well, where the nozzle installation is tracked once successfully scanned.

2. This nozzle is only compatible with the Signature Standup 2.0 Machines.
